

ADVANCED PROJECT CONTROLS

We are a global team of Project Controls consultants and technologists. We make it easier for you to plan and execute Capital Projects.

Our consulting practice is based on our proven ProNovo Optimization Model methodology and tools. Our comprehensive solutions manage your entire Project Controls lifecycle. We feature Oracle Primavera technologies seamlessly integrated with your ERP and in-house tools.

INDUSTRIES WE SERVE

**Oil, Gas,
& Energy**

Manufacturing

**Engineering
& Construction**

**Transportation
& Automotive**

**Public Sector
& Education**

THE PRONOVO DIFFERENCE

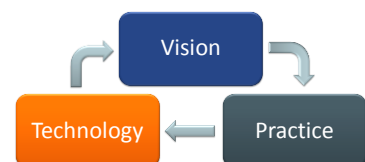

We offer a unique blend of industry, practice, and product knowledge backed by a global deployment team.

Proven Approach

ProNovo offers a top-down, strategic approach to project controls. We ensure your strategic plan addresses organizational, practice, and technology variables. Our mature methodology, best practice standards, and optimized workflows samples expedite practice improvement and solution design. Your ProNovo project team designs and builds solutions that meet today's requirements and scale to tomorrow's vision.

Our Approach

Project Controls is much more than technology. We believe technology supports and enables optimized practice. That's why we utilize a top-down approach, assessing and aligning all aspects of your project controls practice.

Product Expertise

As former Skire and Oracle employees, our management team has designed and deployed Primavera Unifier solutions around the globe. Our successes range from departmental to enterprise solutions, and include the largest Primavera Unifier deployment in history. Because Unifier is most effective when integrated, we commonly build solutions linked seamlessly with leading ERP systems including Oracle E-Business Suite (EBS) and SAP. We also incorporate complementary Primavera technologies in our solutions, including P6 EPPM, Primavera Analytics, Oracle BI Publisher, and Primavera Gateway.

Flexible Delivery Model

From concept to design, our Project Team of consultants and technologists works side-by-side with you. The onsite team is supported by our Global Development Centers, who build and test your solution. We partner with you to test and deploy your solution, and our Support staff mentors you to self sufficiency.

SERVICES

ProNovo advanced project controls solutions leverage best practices with leading technologies. Our expert methodologies and tools help accelerate and guide you from strategy to plan to deployment.

Project Controls Vision & Strategy

Since capital projects are critical to your organization, we ensure alignment of project controls with your core business. Our consultants assess current practices, technologies, and results. We streamline future processes, and quantify goals and requirements. We define your Conceptual Solution and Deployment Plan as a roadmap to successful implementation of your project controls solution.

Practice Improvement

Practice Improvement initiatives achieve consistency and consensus of streamlined processes and methods. Clearly defined practices are a prerequisite to technology deployment.

Technology Assessment & Selection

Project Controls Solutions combine best-in-class technologies including capital planning, scheduling, cost, contracts, and data analytics. These tools integrate with existing business systems including ERP and financials to provide critical portfolio and project data to team members. ProNovo helps you identify gaps in your Project Controls technology stack. We then assist to identify and assess potential component solutions.

Solution Design

Regardless of budget, scope, or scale, ProNovo ensures the solution is fully functional when deployed and scalable to meet your future plans. ProNovo offers both Conceptual and Detailed Solution Design services. Conceptual Design translates your vision into an overall architecture, which may be deployed in phases. Detailed Design specifies configuration and customization instructions for the current phase deployment.

System Development & Implementation

ProNovo uses a flexible delivery and rapid deployment model to reduce costs and accelerate implementation. ProNovo's Solution Accelerators include pre-configured object libraries, industry standard reports/dashboards, and data connectors. Our proprietary tools are designed to deploy solutions quickly and cost effectively.
